The Facts about Nutec

Since the early 1980's Everite Building Products recognised the health risks associated with use of asbestos in the manufacture of fibre cement building products. It embarked on a rigorous development programme to find an alternative to asbestos in the manufacture of fibre cement - an alternative which would be safe and environmentally acceptable.

1985 The first asbestos-free flat sheets were voluntarily introduced by Everite Building Products and comprised 60% of production.

1987 Occupational Asbestos Regulations introduced by Department of Labour are based on the Everite Safety Manual.

2002 Since the early 1980's till 2002 more than R140 million is invested in New Technology research which culminated when Everite used its last bag of asbestos on 13 December 2002. Since then, all products manufactured by Everite are asbestos-free and when compared to the asbestos cement product, are equal to or superior in performance .

2004 21 June 2004, The South African Government announced a pending ban on all asbestos containing products for which there is no substitute available. This would signal the end of imports of asbestos cement building materials and pipes from neighbouring countries.

2008 Almost a quarter of a century later since Everite produced its first asbestos-free fibre-cement sheet Nutec, that the South African Government announced a ban on the use, processing or manufacturing, of any asbestos or asbestos containing products on the 28th of March 2008.

So what can you expect from Nutec?

SAFETY

Nutec product is made from safe materials and is environmentally friendly. It contains no asbestos fibres and does not affect your health.

SECURE

Nutec product is SABS approved and what's more, it is manufactured under the Quality Management System that complies with the requirements of the International Standard ISO 2001: 2008.

DURABLE

Nutec product is resistant to:
> HAIL > FIRE > WIND > FUNGUS > ACID > RUST

THERMAL INSULATION

Nutec roofing has excellent thermal properties when compared to other roofing materials.
